Subject: Extra Feature

My program doesn't work unfortunately, however there's few addition features that I would like to add;

1. Main Menu - By adding main menu, the player can simply choose to go to single player option to play against the computer or multiplayer option to go against someone else. I also can add the settings option to change the settings that they like such as the symbol they want to play tictac-toe with.

2. Board - Instead of 3 x 3 board, I would like the user to decide it by themselves on how many rows and columns that they want to play with and the number of symbols that they have to get to win the tictac-toe game.

3. 3rd Player Option - Instead of playing 1 vs 1, it would be interesting to another player to the game. But to do this, a variety of symbols required other than 'X' and 'O'. A bigger board also required for this option to run smoothly.

4. Tie - Breaker - Instead of tie or draw, the board will added to become bigger so that the player can continue from there instead of resetting everything to scratch.
